

Transitional Care Suites

*Special healing environment.
Homelike atmosphere.*

Our Transitional Care Suites (TCS) offer a special healing environment for patients who no longer require all the resources of an acute-care hospital, but who are still too ill to be cared for at home.

This includes:

- A team of dedicated health professionals
- Warm, homelike atmosphere
- Quality skilled nursing and comprehensive rehabilitation services

The focus of our Transitional Care Suites is to help individuals prepare to return home, or to independent living, after receiving the appropriate post-acute care. The length of stay for patients in our TCS can vary from just a few days to a month or more, depending on the patient's specific needs.

Our collaborative medical team promotes optimum levels of recovery and function by recognizing and intervening to meet each patient's physical, emotional, social and spiritual needs.

*Services Provided at Our
